

Proxidyne Relay

Proxidyne Relay wirelessly connects your existing and new sensors to your Proxidyne Bridge.

Bridge connects to in-store sensors and automatically dispatches retail staff via two-way radios, text messages or smartphone app.

Simply connect your in-store sensors with Proxidyne Relay and your Bridge will start notifying staff when customers are in high value aisles and non-staffed service counters. Use Proxidyne Relay with call buttons, pressure sensitive mats, video cameras, IR sensors, and any device that supports dry contacts.

Proxidyne Relay with cover removed.

Features

- **Easy setup:** Connect your existing dry contact devices right to the Relay.
- **Wireless:** Save time and money with easy installation without running any wires.
- **Long Life:** Batteries last up to a year.
- **Secure:** Uses industry-standard security for communication.
- **Long Range:** Up to 150 feet (and further range with Bleu Repeater).
